ABSTRACT

A method for making a spark plug is provided. The method comprises the steps of, for adjustment of a spark gap, provisionally pressing a ground electrode toward a leading end surface of a center electrode and thereby decreasing the spark gap to a predetermined value larger than a final target gap gt, after the step of provisionally pressing the ground electrode, adjustment bending performing an process eliminating an eccentricity δ of the ground electrode 10 in the widthwise direction thereof with respect to a target position, after the step of performing the adjustment bending process, measuring a spark gap gl measuring a difference (g1-gt) between and measured spark gap gl and the final target gap gt, and 15 ground electrode toward the pressing the electrode when the difference (gl-gt) is positive. apparatus for carrying out the method is also provided.
